### **Message from the Guest Editors**

The 2019 Collaborative Conference on Materials Research (CCMR) will take place in Goyang Gyeonggi (South Korea), 3–7 June, 2019. Materials research, the science and technologies for the generation, processing and fabrication of materials, is where the disciplines merge and where they diverge into a remarkable range of applications, from electronics to health care that touch, or will soon touch, the lives of millions. The CCMR series aims to enable the technological developments in the various fields of materials and to further the goal of unifying materials research in engineering, physics, biology, materials science, as well as chemistry and neuroscience.

This Special Issue, “Nanotechnologies and Nanomaterials: Selected Papers from CCMR 2019”, will contain the accepted papers presented during 2019 CCMR, related to ‘nanotechnologies and nanomaterials.’ The selected papers will include nano-materials preparation, modification, characterization, properties and the applications of any compositions and morphologies, including carbon nanotubes, graphene, metal, oxide materials, polymer, molecules, nanoparticles, nanowires, quantum dots, etc.

Deadline for manuscript submissions:

**31 July 2019**

## Editor-in-Chief

### **Prof. Dr. Shirley Chiang**

Department of Physics, University of California Davis, One Shields Avenue, Davis, CA 95616-5270, USA

## Message from the Editor-in-Chief

Nanoscience and nanotechnology are exciting fields of research and development, with wide applications to electronic, optical, and magnetic devices, biology, medicine, energy, and defense. At the heart of these fields are the synthesis, characterization, modeling, and applications of new materials with lower nanometer-scale dimensions, which we call “nanomaterials”. These materials can exhibit unusual mesoscopic properties and include nanoparticles, coatings and thin films, metal-organic frameworks, membranes, nano-alloys, quantum dots, self-assemblies, 2D materials such as graphene, and nanotubes. Our journal, *Nanomaterials*, has the goal of publishing the highest quality papers on all aspects of nanomaterial science to an interdisciplinary scientific audience. All of our articles are published with rigorous refereeing and open access.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High visibility:** indexed by the Science Citation Index Expanded (Web of Science), Scopus, Chemical Abstracts, Inspec and Polymer Library. Citations available in PubMed, full-text archived in PubMed Central

**Rapid publication:** manuscripts are peer-reviewed and a first decision provided to authors approximately 14 days after submission; acceptance to publication is undertaken in 4.95 days (median values for papers published in the first six months of 2018).
